

P-Series

**AVAILABLE
IN 2010**
4.7 Summer, 5.3 Fall

Fast. Easy. And Light Weight.

If it wasn't a boat, you'd marry her. Wing's new P-Series is an extraordinary achievement in fully inflatable boat technology. Made of Cooley Coolthane® polyurethane fabric, the P-Series is stronger and enjoys 2-3 times the puncture resistance of Hypalon and PVC products. Tube seams are heat welded into a single fabric— not glued— forming a joint even stronger than the material itself.

But the running surface design of the P-Series is what truly sets it apart. In speed tests with a medium load, the P-4.7 *without* speed tubes achieved the same top-end speed as a competitive model *with* speed tubes. Additionally, the P-4.7 throws a smaller

wake profile — so clandestine operations stay that way.

Under light load conditions with a 40-hp engine, the P-4.7 exceeds 30 miles per hour. It also features 20% more usable deck space than similar-sized competitive models.

The P-Series includes 4.7 m and 5.3 m models developed by experts in white-water rafting, swift water rescue and surf zone and littoral boat operations. So we've learned a thing or two about building durable boats — like incorporating non-deteriorating composite transoms for example.

Lastly, every California-built Wing boat is Berry Amendment compliant so your hard-earned money stays in-country.

Fully inflatable Polyurethane construction with rub strakes. Prototype shown. Production models include standard D-rings and lifelines.

Composite transom: lighter weight and higher strength than aluminum; won't decay like wood.

Unique running surface design produces competitive speeds without speed tubes, producing a smaller wake profile.

Berry Amendment compliant

KEY FEATURES AND BENEFITS

- ✓ *The design of the P-4.7 without speed tubes out-performs the competition's boats with speed tubes in a medium load.*
- ✓ *Usable deck space of the P-4.7 is 20% greater than competitive models.*
- ✓ *Independent tests prove Polyurethane fabric makes a stronger, more durable tube with better air-holding characteristics than Hypalon or PVC alternatives, contributing to superior performance in all conditions.*
- ✓ *Thermal welded seam failure is virtually non-existent. Count on extended service life thanks to virtually no maintenance required on welded versus glued seams.*

SPECIFICATIONS

	P-4.7	P-5.3
LOA:	15'5" / 4.7 m	17'7" / 5.3 m
Beam:	6'6" / 1.93 m	7'3" / 2.24 m
Usable deck space	38.73 sq. ft / 3.6 sm	TBD
Weight, incl. roll-up deck	TBD	TBD
Max. Payload (incl. engine, fuel and roll-up deck)	TBD	TBD
Persons Capacity:	11	13

Specifications are estimates and are subject to variance.

P-Series

At Wing, we cut our teeth white water-rafting. For essentially two decades we have experimented and tested designs and materials in some of the harshest environments imaginable— shooting rapids, strafing rocks, dropping down waterfalls, breaking surf, and more fun stuff. This new P-Series is the culmination of those tests, surpassing even our lofty expectations in terms of durability and performance.

Instead of the original Hypalon boats popular the 80's, we've always built Polyurethane boats exclusively at our California-based facility. Polyurethane is tougher, lasts longer, holds air better and results in a more environmentally-friendly production process.

If those things aren't as critical to you as cost, we also offer an H-Series of solid-quality imported Hypalon boats. We're all about giving you choices.

STANDARD FEATURES

- D-rings for towing bridle
- Deck drain, high capacity
- External/Internal lifelines
- Handles, 5 ea. side, one bow
- Keel, 9" inflatable with valve
- Lifting rings (4)
- Rub strakes on sides and keel
- Composite transom — lighter and stronger than aluminum and impervious to deterioration from water intrusion (won't rot like wood)
- Transom tow eyes
- Wing warranty

NOTABLE OPTIONS

- Auto-inflation
- Dull Coat
- Roll-up deck
- Fleet customization: for multiple boat orders we will entertain special requests ranging from color options to Ninja knife holders- just ask!
